

On what may have been the hottest day of the year,
July 19th 2024, work began on settling in the boat.
Passersby intrigued and asking – ***but WHY a boat?***

First the shingle round the base, then some
in the boat for drainage, followed by matting
on top of gravel, before the soil was added

All tidy and completed by 4.30 that day

Magnificent work carried out by all
volunteers, working in extreme heat.
